Gli invertebrati

- Collega ogni gruppo di invertebrati alla loro giusta definizione.

insetti

molluschi

crostacei

aracnidi

anellidi

Hanno quattro paia di zampe, non hanno antenne e incutono molta paura.

Sono animali dal corpo molle. Alcuni sono protetti da un guscio.

Hanno tre paia di zampe e il corpo diviso in capo, torace e addome.

Si chiamano così perché il loro corpo è formato da segmenti simili ad anelli.

Hanno uno scheletro esterno chiamato esoscheletro che li protegge.

Gli invertebrati

- Scrivi il nome e il gruppo di invertebrati (insetti, aracnidi, crostacei, molluschi o anellidi) a cui appartiene ogni animale illustrato.
